

## Value-added weather solutions for construction projects

The quality and reliability of weather forecasting determines the safety, efficiency and profitability of any construction project. MeteoGroup provides accurate, tailored weather information, ensuring optimised operational efficiency.

### Quality Service

We understand that all builds have different requirements therefore we tailor the delivery of our forecasts to your needs. Our experts understand the pressures involved in completing construction work safely and on time and our value-added solutions will minimise the disruption caused by adverse weather conditions.

All services are supported by monitoring and consultancy from MeteoGroup's skilled team of meteorologists, available for forecast assistance or one-to-on advice for weather critical build phases.

# Weather solutions for the building and construction industry

MeteoGroup's building and construction weather forecasting services form part of the most comprehensive suite of dedicated weather information available to site managers and plant operatives today.

Weather plays a critical role in construction projects, affecting everything from safety issues to the day to day running of your building site. Avoid unforeseen delays to your build programme with better planning around adverse weather. Increase productivity, maintain safety on site and cut down on wasted materials and manpower.

Working with our clients, MeteoGroup's forecasts are built around established specifications or can be custom built to individual needs. We have identified weather elements which are critical for planning and safety on build sites including precipitation, relative humidity, dew point, frost occurrence and duration, temperature, UV index and wind speed and direction. Highly detailed short term forecasts and longer range weather outlooks provide all the information you need. You can even determine your own individual thresholds for specific weather conditions to trigger warning alerts.
