Why choose RoadCast?

RoadCast is an essential service for businesses involved in highway operations. Produced specifically for your requirements throughout the year, it provides up-to-the minute weather information for strategic locations across the highways network with market-leading levels of accuracy.

With an unrivalled track record in the UK and around Europe, MeteoGroup has developed the most comprehensive suite of dedicated weather forecasting services available to highway network managers today. Forecasts are produced by our team of dedicated highways meteorologists who are on hand to provide expert assistance 24/7/365. All site forecasts are quality controlled, edited and proactively monitored with timely updates and amendments issued as and when necessary.

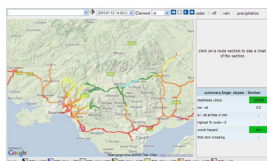

What does RoadCast offer?

RoadCast is a bespoke service, tailored to provide solutions to meet your exact requirements.

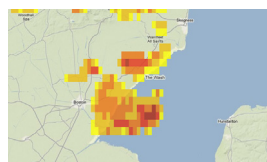

Winter highway service

MeteoGroup's winter highway weather forecasting services range from traditional domain based forecasting to route based forecasting solutions. All services are enhanced with site specific forecasts to enable verification at RWIS locations.

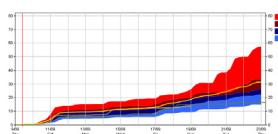

Forecasts are delivered via www.RoadCast.co.uk, MeteoGroup's website dedicated to highway weather forecasting. RoadCast clients benefit from industry leading levels of accuracy, supported 24 hours a day by our dedicated, highly experienced highways forecasting team.

RoadCast also provides a comprehensive suite of bespoke meteorological information, including up-to-the minute RWIS observations, precipitation type radar forecasts, ensemble forecasts for up to 30 days ahead and a client dedicated actions message board. Our detailed forecast information and constant vigilance ensures the safety of your network whilst minimising unnecessary treatments.

Summer highway service

During the summer, high winds and heavy rainfall pose a continued threat to safety on the UK's highways, whilst high surface temperatures can interfere with the application and maintenance of road surfaces. RoadCast offers 2-5 day forecasts, supported by round-the clock consultancy. Forecasts include total rainfall and maximum air and road surface temperatures. Graphs and text summaries are also provided for an instant overview of short term regional and site specific forecasts.

How does it work behind the scenes?

Our continual investment in research and development ensures RoadCast is constantly being improved in line with the latest developments in meteorology such as ensemble forecasting techniques and super-high resolution forecasting models.

MeteoGroup's long experience in the UK highways market gives us an in-depth knowledge of all geographical locations whilst forecaster intervention allows us to produce road weather forecasts to a consistent and enviable standard. This enables highway authorities to make decisions with confidence.

If you would like more detail on MeteoGroup's forecasting capabilities please don't hesitate to contact us.
